Automatic feeders

for piglet rearing and pig finishing
Automatic feeders both for piglet rearing and pig finishing – for a good piglet

Automatic feeders for piglet rearing

Big Dutchman offers its customers a wide range of automatic feeders for different areas of application:
- automatic feeders for piglet rearing;
- automatic feeders for pig finishing;
- automatic feeders for large groups which allow several pigs to eat simultaneously;
- individual feeders, allowing only one sow to eat at a time.

All automatic feeders can be used for pellets, granu-

MultiPorc

MultiPorc allows for ad lib dry feeding of weaners from 6 kg to 30 kg. It is entirely made of stainless steel and can be supplied with 5 or 10 individual feeding spaces.

PigNic
- for up to 40 weaners with a weaning weight from 8 kg upwards;
- special feed trough with feed and water separation so that no feed falls into the drinker trough;
- 2 bowls on the left and right hand side ensure that the pigs receive ample water.

PigNic-EW
- for up to 40 weaners with a starting weight of 6 kg;
- the special dosing mechanism is easily operated by the piglets;
- PigNic-EW-Jumbo can be used for 70 - 80 piglets.

Swing
- for up to 40 weaners with a starting weight of 6 kg;
- the special design of the hopper (90 l) prevents feed bridging;
- the special dosing mechanism is easily operated by the piglets;
- a round trough for best use of eating space; no dirty corners.
les or meal and can be supplied to accommodate any type of dry feed system either automatically or manually. The feeders can be mounted onto a partition or they can be self-supporting within the pen. Let our experts advise you on which type of automatic feeder is the best possible solution for your house!

**MultiMax**

MultiMax is an automatic feeder for dry feed especially designed for ad lib feeding of finishing pigs. The feeder is made of plastic with a stainless steel edge and can be supplied with 4 or 8 feeding spaces. The amount of feed to be fed can easily be adjusted. The feeder is equipped with vibrators to prevent bridging of feed.

**PigNic**

- PigNic supplies up to 40 pigs; PigNic-Jumbo supplies 70 - 80 pigs;
- see-through hopper with a capacity of 80 l / 150 l;
- 2 / 3 drinking nipples for sufficient supply of drinking water. Even though the feed and water are separated from each other, the pigs are still able to moisten their feed which leads to an increased intake;
- 360° pivoted dosing mechanism ensures that the feed does not clump and that the pigs can easily operate the feeder;
- easy adjustment of feed amount;
- the deep stainless steel trough is arranged at some distance above the ground which allows for easy cleaning of the area underneath the trough;
- folding lid for quick monitoring and easy cleaning;
- agitator inside the storage tank prevents feed bridging.

**PigNic-Jumbo**

**Lean Machine**

- 1 feeder supplies up to 40 pigs;
- 80 l hopper;
- the two integrated moisteners can easily be operated by the pigs;
- an easily-accessible dosing mechanism allows precise adjustment of the amount of feed that is to be fed;
- a round trough for best use of eating space; no dirty corners;
- feeder can be supplied in stainless steel.
Keeping piglets and finishing pigs in large groups is a cost-efficient solution. To allow the farm manager to move pigs in or out without problems or for any type of selection process, the group pens need to be equipped with a dividing door. The advantages are obvious:

- reduced investment costs per animal place caused by savings in housing and feeding equipment;
- better layout of the pen since the pigs are more free to move around over the same surface area;
- the pens are divided into activity and resting areas as well as a special dunging area.

Wet/dry feeder for the final finishing period

Both automatic feeders are individual feeders with the following characteristics:
- 1 feeder for up to 12 pigs with a weight of approx. 25 kg;
- integrated trough dispenser to moisten the feed;
- trough pan with a stainless steel edge for a long service life;
- feeders made of recyclable plastic and stainless steel.

**SINGLEPORC IV features:**
- 60 l hopper;
- easily-accessible dosing lever allows for feed adjustment in 8 steps;
- unobstructed view into the feed trough makes for ideal monitoring.

**SINGLEPORC VI features:**
- 50 l hopper;
- easily-accessible dosing lever allows for feed adjustment in 10 steps, including »stop«;
- stainless steel dosing mechanism can easily be dismantled.

Large group pens for modern piglet rearing and pig finishing
